## CURVY OPPOSITES

### WHAT YOU WILL NEED:

- 1 14" square of a medium-dark print
- 1 14" square of a light but complimentary print, preferably of opposite color

### CONSTRUCTION:

Stack the two squares **right sides UP**. Iron a fold going **ACROSS** the blocks at the mid-point. Still with **right sides UP**, on a cutting board, make 2 to 3 random gently curving cuts from bottom to top on the stacks. Do not place any part of any curve closer than 1 inch to any other curved cut. Each cut should be different from any other (Fig. A). When your random cuts are made, you will have 2 identically shaped blocks but the colors will be opposite on each block (Fig. B).

Now take section "A" from the **top** stack and section "B" from the **bottom** stack, match them at the center fold (right sides **together**) and sew them together from the centerpoint outward. Add section "C" from the **top** and sew, then section "D" from the **bottom**.

You will have a curved-seam striped block of your two colors, plus the pieces to sew another block that will be just the reverse colors of your first sewn block. When both blocks are sewn together, press them well and starch them. Then trim them to an accurate 12-1/2" square.
