

From Photo to Fabric: design in the palm of your hand

With Lisa Thorpe <https://lisathorpe.com>
HSV Quilt Guild 4/11/24 Monthly Meeting

Did you know your smart phone or tablet is a fabric art tool? First, I'll demonstrate, via projected screen sharing, how to take a photo on your smart phone or tablet, manipulate it in an app and print the image onto fabric on a home printer or fabric printing service. I share a variety of art quilts I've created with these images as a central theme. As well as several art quilts using multiple photo images tiled together to create a stunning collaged quilt effect.

Next, I have also come up with an easy way to create a repeat printed fabric in 4 steps using your smart phone or tablet. I will explain the process of creating and uploading your own repeat print fabric designs from photos. This lecture comes with handouts detailing apps, printer info plus fabric printing sources. I will also show an array of beautiful fabrics I've created and along with examples of how I've used them in my art quilting and clothing, and home designs.
